

We have worked on over dozens of public school buildings in the municipalities of Newton, Waltham, Westford, and Nantucket as well as the North Bennet Street School and UMass. Our work has ranged from creating new classrooms, shops, offices, and service facilities within a school's existing structure to site selection, and new and modular construction.

As University of Massachusetts- Amherst "House Doctor" for on-call renovations and repairs of its facilities our work involves planning, programming, and comprehensive architectural and engineering services. TBA has completed renovations for a laboratory, modifications to several dormitories and maintenance and grounds facilities.

As the planner/architect for the North Bennet Street School our work included a comprehensive survey of the school's eight-building complex for program efficiency, code compliance, general maintenance, expansion planning and renovations.

TBA is an acknowledged specialist in "fitting facilities to their missions". Analyzing facility needs, providing comprehensive space planning and based on these plans, fashioning an architectural response that is direct, efficient, and cost effective.
