

TBA Architects, Inc. has offered design and renovation services for every variety of multi-family housing since its inception in 1986. We have designed homes for families, singles, elders and people with special needs in both the public, with the Department of Housing and Community Development, and private sectors.

Our projects have ranged from single room occupancy and affordable housing to condos and custom crafted single family homes; from new wood frame single, duplex, quadruplex and townhouse construction to renovation of mid-rise brick and steel structures. We achieve these ends through creating new housing out of old buildings through gut or partial renovation and rejuvenating existing apartment and condominium complexes through envelope improvements and access renovations.

Comfort, security and contextual sensitivity are TBA's housing goals. Our energy conservation measures, including life cycle analysis, improve resident comfort and augment control over their environments by upgrading mechanical and electrical systems. TBA's experience in public safety design enables us to improve resident security efficiently, without lessening the community's residential character. Our award-winning historical design and extensive mid-century work enables us to respect the character of our environs while ensuring efficiency and solidity. Regardless of the scale of the project, we aim to make housing that a person can come home to.
