

Roof Improvements

In addition to the countless roofs attached to new and renovated construction, TBA Architects has completed several roof improvement projects. TBA's roof experience extends to all building types including schools, commercial buildings, municipal buildings, and housing.

Our work is done with a focus on specifying, including an analysis of available options and of each manufacturer's products ensuring compatibility with building aesthetic, form, equipment and use; concern for the budget ensuring a feasible project; and attention to detail ensuring long-lasting, functional installations.

Projects fall into two basic categories: replacement to improve performance, energy efficiency and maintenance; or to match historically correct conditions. We have employed all types of roofing to achieve these goals including all manner of membranes, metal, shingle and slate.
