

# Window & Glazing Improvements

TBA Architects has designed and implemented window replacement systems for over 6,000 windows for public and private clients on building types ranging from schools to municipal buildings to housing.

Our work is done with a focus in four areas: attention to detail ensuring long-lasting, functional window installations; attention to budget ensuring a feasible project; attention to specifying including an analysis of each manufacturer's ability to deliver on a set schedule thus ensuring timely installation; attention to building system options ensuring aesthetic choices that enhance a building's appearance without sacrificing functionality.

It is our belief that no other single component does as much to improve a building's energy efficiency, performance, aesthetic and stability as a window replacement or restoration project.
